

Digi Pass Device

Safe, simple and quick device for generation of one-time codes.

With one-time individual codes received by Digi Pass device you can order the Bank to implement transfers without limit as in national currency, as well as in foreign currency, to get variety of banking service remotely without visiting the Bank.

How to use Digi Pass device?

By press OK button the device is turning on.

After the first turning on the device requires to change PIN code

The standard initial PIN code is „0000“.

Enter Standard PIN „0000“.

After that shall be entered the new PIN twice times and shall be saved, that is necessary for generation of one-time transfer's codes.

How to generate one-time transfer's codes?

Upon switching on is required to enter PIN code set by us.

In case of rapid PIN code entry the screen of device will indicate text - „SELECT“.

By press button „1“ -the 6 digits one-time code is generated.

For step back from any order is used button „C“.

In case of incorrect entry of PIN the device displays text- „FAIL“ and quantity of incorrect attempts of PIN entering.

In case of incorrect entering of PIN 3 consecutive times the device gets blocked and the owner of it has to contact the Bank for unblocking.

While unblocking the device:

The screen displays text- „PIN LOCKED“ and 8 digits code, the customer is provide the bank operator with specified unblocking code and operator will provide the customer the unblocking code consists of 8 digits.

Upon turning on the blocked device after pushing button OK will be display „-----“ symbols. Right here the unblocking code, provided by the employee of the Bank has to be entered.

After the unblocking, the device requires installment of new PIN code in compliance with above method.

For turning off the device use button „C“.
